

Week-5 Day -2 Assignments

Task 1: User Story reviewer

Screenshot of the Langflow workflow execution:

The screenshot shows the execution results of the 'User Story Review Agent' workflow. The status is 'Finished in 2.7K | 2.2s'.

User Story Review Summary

Parameter	Description	Score (out of 20)
Clarity	The story is vague and lacks detailed acceptance criteria.	6
Completeness	Preconditions not clearly mentioned, and acceptance criteria are missing.	4
Business Value Alignment	The story has some relevance to healthcare but lacks a clear focus on compliance or patient safety.	10
Testability	It's difficult to derive test cases from this story due to the lack of acceptance criteria.	5
Technical Feasibility	The story is too vague to determine technical feasibility.	8

Overall Score: 33 / 100
Improvement Areas:

- Add explicit acceptance criteria:** Define clear and specific acceptance criteria for employee profile functionality, including error handling and validation rules.
- Specify preconditions:** Clearly mention preconditions for employee profile functionality, such as user authentication and authorization.

Run Flow

Add a [Chat Input](#) component to your flow to send messages.

Default Session

Overall Score: 33 / 100

Improvement Areas:

1. Add explicit acceptance criteria: Define clear and specific acceptance criteria for employee profile functionality, including error handling and validation rules.

2. Specify preconditions: Clearly mention preconditions for employee profile functionality, such as user authentication and authorization.

3. Enhance business value alignment: Refocus the story on tangible healthcare value, such as patient safety, compliance, or operational efficiency.

4. Improve testability: Derive clear test cases from the acceptance criteria to ensure the functionality works as expected.

5. Clarify technical feasibility: Provide more information about the technical requirements and constraints for implementing the employee profile functionality.

Recommendations for Improvement:

To improve the overall quality of the user story, consider the following:

• Revise the story to include clear and specific acceptance criteria.

• Specify preconditions for employee profile functionality.

• Enhance the business value alignment by focusing on tangible healthcare value.

• Improve testability by deriving clear test cases from the acceptance criteria.

• Clarify technical feasibility by providing more information about the technical requirements and constraints.

Default Session

1. Add explicit acceptance criteria: Define clear and specific acceptance criteria for employee profile functionality, including error handling and validation rules.

2. Specify preconditions: Clearly mention preconditions for employee profile functionality, such as user authentication and authorization.

3. Enhance business value alignment: Refocus the story on tangible healthcare value, such as patient safety, compliance, or operational efficiency.

4. Improve testability: Derive clear test cases from the acceptance criteria to ensure the functionality works as expected.

5. Clarify technical feasibility: Provide more information about the technical requirements and constraints for implementing the employee profile functionality.

Recommendations for Improvement:

To improve the overall quality of the user story, consider the following:

• Revise the story to include clear and specific acceptance criteria.

• Specify preconditions for employee profile functionality.

• Enhance the business value alignment by focusing on tangible healthcare value.

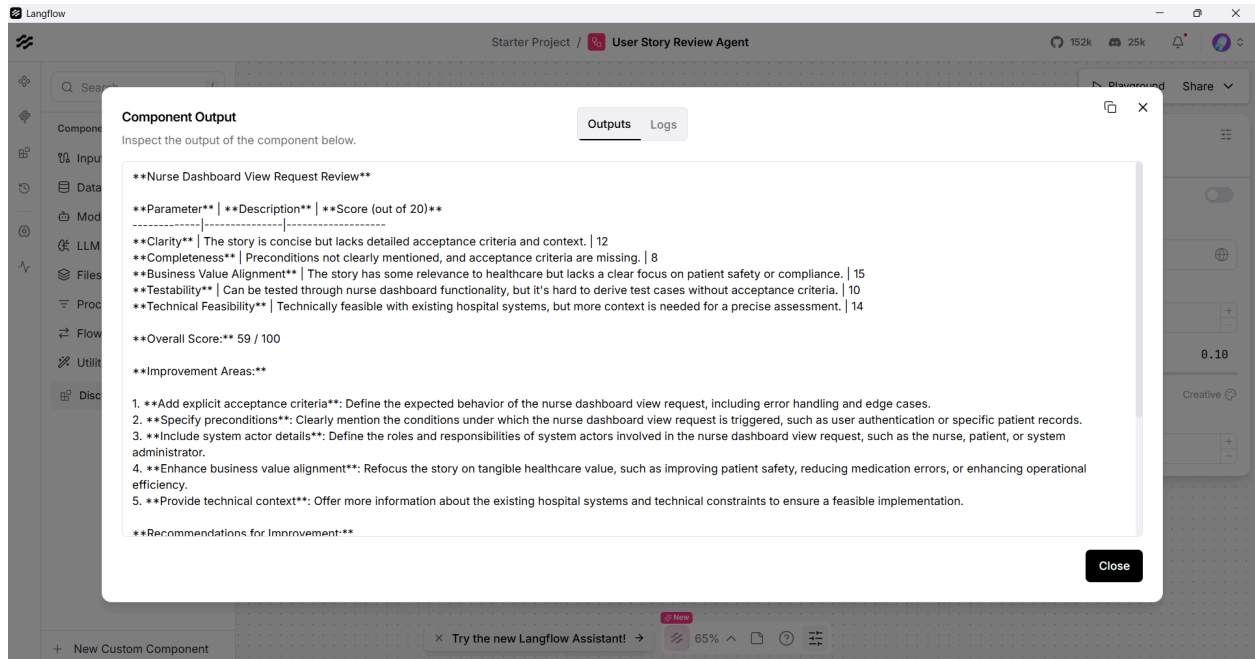

• Improve testability by deriving clear test cases from the acceptance criteria.

• Clarify technical feasibility by providing more information about the technical requirements and constraints.

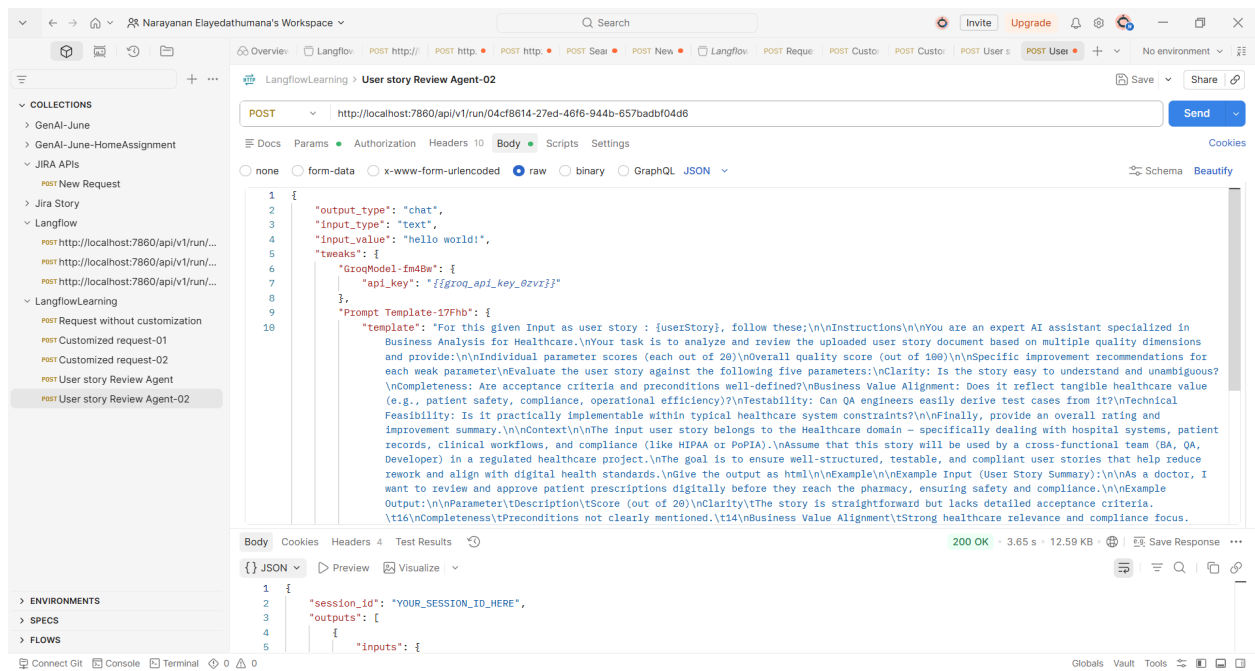

By addressing these areas, you can improve the overall quality of the user story and ensure that it meets the needs of the cross-functional team and stakeholders.

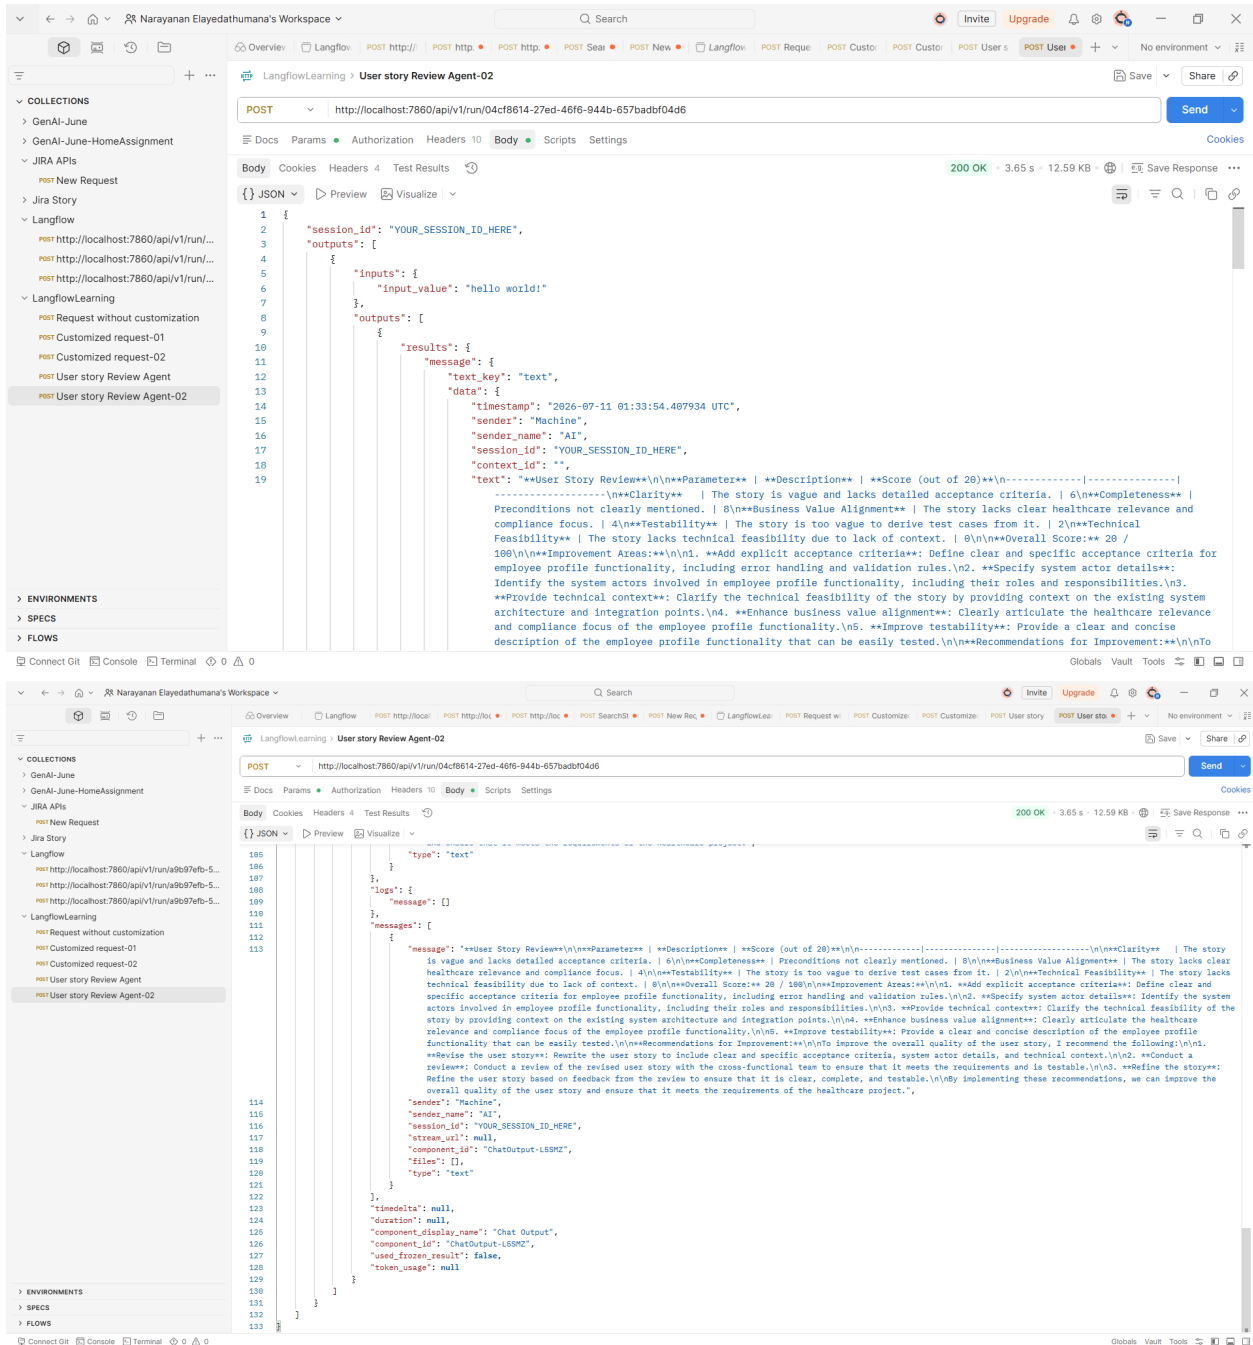

Run Flow

Add a Chat Input component to your flow to send messages.

Components

- Files & Knowledge
 - File System
 - Knowledge
 - Memory Base
 - Read File
 - Write File
- Data Sources
 - API Request
- Bundles
 - Git
 - GitExtractor
 - File Processing
 - File Content Re...
 - File Description...

Workflow:

- Read File (53ms) - Loads and returns the content from uploaded files. Files: invoicefile.pdf (590.4 KB). Advanced Parser: ☐. Raw Content: []
- Chat In... (37ms) - Receives input from the Read File node.
- Prompt Template (yes) - Create a prompt template with dynamic variables. Template: You are an intelligent document assistant. You are provided with the document. Receiving input: []. question: Receiving input: []. Prompt: []
- Groq (261 | 187ms) - Generate text using Groq. Input: Receiving input: []. System Message: []. Groq API Key: [Groq API Key]. Model: llama-3.3-70b-versatile. Enable Tool Models: ☐. Model Response: []
- Chat O... (28ms) - Receives input from the Groq node.

Sessions

Upload File API Curl:

The screenshot displays the Langflow web application interface. On the left, a sidebar lists various collections, including 'LangflowLearning' and 'PDF Extractor - Upload file'. The main panel shows the configuration for a POST request to the endpoint `http://localhost:7860/api/v2/files`. The request body is set to 'form-data', and a file named 'invoicefile.pdf' is attached. The response body is shown in JSON format, indicating a successful upload with a 201 status code.

```
POST http://localhost:7860/api/v2/files
```

Key	Value	Description
file	invoicefile.pdf	

```
{ "id": "2e8a1198-52e8-4d8b-889d-83382c764edc", "name": "invoicefile (2)", "path": "e613838e-318a-4cc7-9747-08595620e15a/invoicefile (2).pdf", "size": 594333, "provider": null }
```

Get Data API Curl

The screenshot displays the Langflow web application interface. On the left, a sidebar lists various collections, including 'LangflowLearning' and 'PDF Extractor - Get the Data from PDF'. The main panel shows the configuration for a POST request to the endpoint `http://localhost:7860/api/v1/run/ae3c27ee-5025-4aa8-81df-af969489ada3`. The request body is set to 'raw' and contains a JSON object with 'output_type', 'input_value', 'session_id', and 'tweaks'. The response body is shown in JSON format, indicating a successful response with a 200 status code.

```
POST http://localhost:7860/api/v1/run/ae3c27ee-5025-4aa8-81df-af969489ada3
```

```
{ "output_type": "chat", "input_value": "hello world!", "session_id": "YOUR_SESSION_ID_HERE", "tweaks": { "file-n9jPl": { "path": [ "e613838e-318a-4cc7-9747-08595620e15a/invoicefile (2).pdf" ] }, "Prompt Template-xZe7v": { "template": "Answer user's questions based on the document below:\n\n--\n\n\n{input}\n\n\nExtract only invoice due amount output as\n\nDue Amount is " }
```

```
{ "outputs": [ { "results": { "message": { "text_key": "text", "data": { "timestamp": "2026-07-11 02:18:41.491897 UTC", "sender": "Machine", "sender_name": "AI", "session_id": "YOUR_SESSION_ID_HERE" } } } } ] }
```
